

Template: WordPress Publishing Checklist with AI Tools

Generated: 4/1/2026

Based on Article: "Best AI tools that publish to WordPress"

Website: <https://scaleblogger.com>

A practical checklist for leveraging AI tools to publish effectively to WordPress while ensuring quality control.

Checklist Items:

- 1. Set Up a Test Environment**
Establish a clean WordPress installation with a known theme and basic SEO plugin for testing AI tool integrations.
Reference Section: [How we evaluated AI publishing tools](#)
- 2. Evaluate API Publishing Capability**
Ensure that the AI tool can create, update, and interact with WordPress posts through its API effectively.
Reference Section: [How we evaluated AI publishing tools](#)
- 3. Implement Editorial Controls**
Configure the tool to support draft creation, approval workflows, and permission-based publishing options.
Reference Section: [How we evaluated AI publishing tools](#)
- 4. Check SEO Integration**
Verify that the AI tool can set titles, meta descriptions, and relevant custom fields to comply with SEO best practices.
Reference Section: [How we evaluated AI publishing tools](#)
- 5. Test Scheduling Features**
Confirm that the tool can delay publishing without requiring complicated workarounds, allowing for scheduled posts.
Reference Section: [How we evaluated AI publishing tools](#)
- 6. Conduct Performance Tracking**
Ensure that analytics capabilities can accurately track content performance metrics associated with published posts.
Reference Section: [How we evaluated AI publishing tools](#)
- 7. Review Content Prior to Publishing**
Keep content as a draft until it has been thoroughly reviewed to maintain quality and compliance with brand voice.
Reference Section: [When direct publishing makes sense](#)

8. Validate Field Mapping

After post creation, check that all required fields such as title, body, and images are correctly formatted and mapped to WordPress.

Reference Section: Where the risk sits

9. Monitor Formatting in Live Environment

Check the final output in WordPress to ensure that AI-generated content renders as expected without formatting issues.
