

Template: Cannabis Seed Germination Checklist

Generated: 8/7/2026

Based on Article: "Exploring Alternative Germination Techniques: From Paper Towels to Germination Stations"
Website: <https://theseedconnect.com>

A practical checklist for selecting and executing various cannabis seed germination methods.

Checklist Items:

- ☐ **1. Assess Your Setup**
Evaluate your growing space, monitoring ability, and transplanting confidence to choose the most suitable germination method.
Reference Section: What If the Best Germination Method Depends on Your Setup?
- ☐ **2. Choose Germination Method**
Select between paper towel, direct soil planting, seed-starting trays, or germination stations based on your setup and needs.
Reference Section: What If the Best Germination Method Depends on Your Setup?
- ☐ **3. Prepare Paper Towels (if chosen)**
Moisten two paper towels, ensuring they are damp but not soaking. Use a clean plate or shallow container for this process.
Reference Section: Paper Towel Germination: A Simple Method for Close Monitoring
- ☐ **4. Plant the Seed**
Place the seed on the first towel, cover it with the second towel, and ensure it is in a warm, dark location.
Reference Section: Paper Towel Germination: A Simple Method for Close Monitoring
- ☐ **5. Monitor Moisture Levels**
Check the paper towel regularly to ensure it remains damp. Add a few drops of water if it begins to dry out.
Reference Section: Paper Towel Germination: A Simple Method for Close Monitoring
- ☐ **6. Transfer Seedling**
Once a visible root has emerged, carefully transfer the seed to prepared growing medium, ensuring the root is facing downward.

- ☐ **7. Check for Common Issues**
Be vigilant for problems such as towel drying out, seeds in standing water, or mold. Implement corrective actions as necessary.
Reference Section: Common problems and corrections
- ☐ **8. Clean Your Tools**
Ensure all containers and tools used are clean to prevent contamination and support healthy seedling growth.
