Based on Article: "How to Germinate Cannabis Seeds Indoors vs. Outdoors"

Website: <https://theseedconnect.com>

A practical checklist for germinating cannabis seeds indoors and outdoors, ensuring optimal conditions for seedling growth.

Checklist Items:

☐ 1. Choose Germination Method

Decide whether to germinate seeds indoors for better control or outdoors for a more natural approach.

Reference Section: What changes when you germinate cannabis seeds indoors or outdoors?

☐ 2. Prepare Indoor Environment

Ensure the indoor space is warm (70°F to 85°F) and dark to promote healthy germination.

Reference Section: One method gives you more control: the indoor germination setup

☐ 3. Select Moisture Control Method

Choose a germination method like the paper towel method, starter cubes, or humidity dome for effective moisture control.

Reference Section: One method gives you more control: the indoor germination setup

☐ 4. Check Soil Temperature Outdoors

Ensure the outdoor soil temperature is warm enough (around 72°F to 79°F) before planting seeds directly in the ground.

Reference Section: A real-world start: how outdoor germination works in the garden

☐ 5. Water Seeds Gently

Whether indoors or outdoors, pre-moisten the medium without soaking to prevent oversaturation.

Reference Section: One method gives you more control: the indoor germination setup

☐ 6. Monitor Seed Progress

Check seeds once or twice daily for signs of cracking and the emergence of a white taproot.

Reference Section: One method gives you more control: the indoor germination setup

☐ 7. Handle Seeds with Care

When planting, gently place the seed with the taproot pointing downwards to avoid damage.

Reference Section: One method gives you more control: the indoor germination setup

☐ 8. Choose Sheltered Outdoor Spot

Select a location in the garden that has stable warmth, good drainage, and protection from pests and harsh weather.

Reference Section: A real-world start: how outdoor germination works in the garden

☐ 9. Be Patient

Allow seeds to germinate in their chosen environment without rushing the process, as outdoor conditions can be less predictable.
